

Atkinson Locking Filler Cap

Oil Tank Security Device

Locking cap for an oil storage tank filler point. The bottom threaded ring goes over the 2" threaded outlet on your tank and is then secured by the brass shear screw.

The top cap then lines up with the elbow locking tab and is secured further by a padlock (not supplied)

Strong aluminium construction cap with a hardened steel locking elbow and a brass shear screw.

Fitting Instructions

Fitting :- Screw on the locking ring first, Do not tighten the shear screw until you have then screwed on the cap and lined up the elbow locking tab, fit your padlock, then tighten the brass shear screw to until the head breaks off to secure the locking ring in place.
