

SIS/BUS Gauges

Apollo Visual Gauge

The Apollo Visual Gauge has many benefits. This gauge offers the ability to view the tank contents in easy to read graduated bars both on the transmitter atop the tank (thus making it easy to know when the tank is full while filling) and on a receiver that can be plugged in in your home.

Benefits:

- Quick & easy installation with no specialist tools required (fitted in minutes)
- Supplied with easy to follow step by step instructions
- Wireless, with up to 200m metres range
- Constant fuel level displayed in easy to read graduations of useable fuel on a conveniently located LCD displays
- Long life lithium battery in tank transmitter
- 1-year manufacturer's warranty
- Built-in visual and audible low-level alarms

Fozmula 4ft Spiral Float Gauge

The Fozmula Spiral Float Gauge is a high precision liquid level gauge that mounts vertically from the top of the tank and provides instant reading of the liquid level in the tank as it is used or filled. This is a fantastic alternative to electronic gauges.

Benefits:

- Completely sealed, no risk of tank contents getting into the gauge
- Magnetic coupling that allows for accurate and immediate readings
- Operates between -20°C to 125 °C
- Easy to read E, 1/4, 1/2, 3/4 and F

Clock Float Gauge

The standard clock float gauge is a simple solution to measuring the oil level in the tank. A plastic float held by a polyester string operates an Empty to Full clock style gauge that sits on top of the tank.

Benefits:

- No electrical connection required
- Easy to operate and read
- Simple installation – just screws into the tank
