GARDEN ECONOMY SYSTEM

PURATANK

SYSTEM:

The Garden Economy is our simplest system for harvesting rainwater, it is ideal for use in gardens to feed hoses for car washing or general garden irrigation. The collected rainwater is held in the tank and pumped out to the applications when needed.

COMPONENTS:

- ❶ The GXRМ is a stainless steel, submersible water pump, it can sit on the bottom of a level tank and has enough power to service most garden-based water needs such as hoses and irrigation.
- ❷ The rodent guard protects the internal water from rodents and large debris which could contaminate the water entering via the overflow.
- ❸ The PF filter is designed with a level drop, this along with its very smooth surface structure allows excess dirt to be rinsed straight through into the sewer or overflow. The filter cartridge mesh is stainless steel within plastic housing and is self-cleaning, though regular inspection is recommended.
- ❹ The 140 pump turret is a flexible plastic connection between the pump and access port allowing smooth flow of the pumped water out towards the application.

ADDITIONAL SPECIFICATIONS

- Pump lifting rope
- Service duct
- Delivery hose (Options available)
- Tanks sold separately

POPULAR USE:

- Garden irrigation
- Cleaning the car
- Washing windows
- Power washing drive/patio
- Outside tap and hosepipe
